When an upside participation rate is shown (for example, w/110% upside participation) a positive return in the index at maturity will be multiplied by this rate, and then the cap (if applicable) will be applied. If no upside participation rate is shown, the rate is 100%.

ADDITIONAL INFORMATION

Surrender charge schedules (contract-date based)

The surrender charge period begins when your contract is issued and ends on your sixth contract anniversary (for the 6-year surrender charge schedule) or your third contract anniversary (for the 3-year surrender charge schedule).

Surrender charges are based on purchase payments withdrawn (reduced for any “free amount” that is in excess of your contract earnings).

Contract years	1	2	3	4	5	6	7+
6-year surrender charge schedule	9%	8%	8%	7%	6%	5%	0%
3-year surrender charge schedule	9%	8%	8%	0%	0%	0%	0%

- Surrender charge “Free amount”: During the first contract year, you have access to the greater of 10% of your purchase payment or earnings without surrender charges. In subsequent years, you have access to the greater of 10% of your prior contract anniversary contract value or earnings without surrender charges.
- No surrender charges apply for amounts paid to the owner if you become terminally ill or are confined to a hospital or nursing home, provided contract requirements are met. The nursing home and hospitalization waiver is available if the owner was under age 76 at contract issue.
- If your spouse beneficiary continues the contract, there will be no surrender charges or market value adjustment on the contract from that point forward.
- The market value adjustment is a positive or negative adjustment that applies to withdrawals (including required minimum distributions and surrender charge “free amount”) or annuitizations during the surrender charge period. The market value adjustment does not apply to withdrawals from the interim account or Income Choice monthly income. The adjustment amount is based on the change in the Bloomberg US Agg Credit index - Yield To Worst rate since the contract was issued.

Death benefits

Standard Death Benefit	Fee
Return of Purchase Payment	Included with no fee up to age 80 (at contract issue)
Optional Death Benefits	Fee
Return of Purchase Payment for ages 81+ (at contract issue)	0.60%
Maximum Anniversary Value (MAV) up to age 80 (at contract issue)	0.30%

- The Return of Purchase Payment death benefit fee is an annual charge based on the guaranteed death benefit.
- The MAV death benefit fee is an annual charge based on the guaranteed death benefit or the contract value (whichever is greater) through age 90. From that point forward, it is based on the guaranteed death benefit.
- Each contract anniversary, the fee is deducted proportionally from all segments and the interim account. The investment base for each segment will also be reduced proportionally.
- The rider fee will reduce the amount that is renewing into a new segment when applicable.

Levels of protection definitions

Buffer: When a segment matures, if the index rate of return is negative and exceeds the buffer, the buffer will reduce your losses. You will only incur the portion of the loss that exceeds the buffer. For example, if the buffer is -10% and the index rate of return is -15% at maturity, you will incur a -5% loss. (For Annual Fee/Annual Fee Plus indexed accounts, the total fee will be deducted after the buffer is applied.) If the index rate of return is a loss that **does not exceed the buffer**, then:

- **For contingent return indexed accounts with a buffer**, you will earn the contingent return. For example if the buffer is -10%, the contingent return is 6%, and the index rate of return is -5% at maturity, your rate of return will be 6%.
- **For dual directional indexed accounts with a buffer**, you will earn a positive rate of return equal to the loss. For example, if the buffer is -10% and the index rate of return is -5%, your rate of return will be 5%.
- **For Annual Fee/Annual Fee Plus indexed accounts with a buffer:** the buffer will first reduce your loss to 0, and then the total fee will be applied. This will be your rate of return.
- **For all other indexed accounts with buffer**, you will not incur a loss. For example, if the buffer is -10% and the index rate of return is -5% at maturity, your rate of return will be 0%.

Trigger: When a segment matures, if the index rate of return is a loss that **exceeds** the trigger, this option will provide no protection and you will incur the full loss return. For example, if the contingent return is 6% and the trigger is -30%:

- If the index rate of return is -25% at maturity, your rate of return will be 6%.
- If the index rate of return is -35%, you will incur a -35% loss.

About rates and contract issue dates

You will receive the applicable rates and annual fees in effect on the application date, provided the contract is issued within 30 days of the application date (plus the number of days until the next business day). Otherwise, you will receive the applicable rates and annual fees in effect on the date the contract is issued.

Contracts are generally issued on the next business day after all payments listed on the application have been received. However, if at least the minimum purchase payment is received within 90 days from the application date, we will automatically issue the contract on the next business day following the 90th day. No payments are allowed once the contract is issued.

If the minimum purchase payment is not received within 90 days from the application date, the application is canceled.
